## Graph Theory

### Eulerian Trail / Path

A trail which passes through every edge exactly once.

If such trail starts and end on same node = Eulerian Circuit / Cycle

### Walk

Sequence of edges connecting vertices without gaps

### Trail

A walk where all edges are different

### Path

Trail where all vertices are different

### Degree

Number of edges to adjacent nodes

$$\text{Degree} = \text{indeg} + \text{outdeg}$$

$$\begin{aligned}\text{outdeg}(1) &= 2 \\ \text{indeg}(1) &= 0\end{aligned}$$

$$\begin{aligned}\text{outdeg}(2) &= 2 \\ \text{indeg}(2) &= 1\end{aligned}$$

$$\begin{aligned}\text{outdeg}(3) &= 2 \\ \text{indeg}(3) &= 2\end{aligned}$$

### Extra Conditions (Euler)

Node with odd degree  $\rightarrow$  first / last

If first = last  $\rightarrow$  even degree

If odd degree nodes  $> 2 \rightarrow$  No Euler path

### Hamiltonian Cycle

一筆書

### Condition of Existence

- 1) Connected graph, num of E = num of V
- 2) No Isolated V
- 3) No V with  $\text{deg} = 1$

- $n = 6, m = 7$
- Set of Vertices ( $V$ ) =  $\{1, 2, 3, 4, 5, 6\}$
- Set of Edges ( $E$ ) =  $\{\{1, 2\}, \{1, 5\}, \{2, 3\}, \{2, 5\}, \{3, 4\}, \{4, 5\}, \{4, 6\}\}$
- $N(4) = \text{Neighborhood}(4) = \{6, 5, 3\}$

### Simple Graph

No loop or multiple edges

Total Degree:  $\sum \deg(v) = 2|E|$ , where  $|E| = \frac{n(n-1)}{2}$

### Complete Graph

Simple undirected graph  $K_n$  which every pair of distinct vertices connected by unique edge

Degree per Node =  $n - 1$  = Num of edges connected to each node

Total Degree =  $n(n - 1)$

Num of  $E = |E| = \frac{n(n-1)}{2}$

### Bipartite

$V$  can be partitioned into 2 sets  $V_1 V_2$

### Tree

Path between 2 nodes  $\equiv 1$

### Adjacency Matrix

|   | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|
| 1 | 0 | 1 | 1 | 0 | 0 | 0 | 0 | 0 |
| 2 | 1 | 0 | 1 | 1 | 1 | 0 | 0 | 0 |
| 3 | 1 | 1 | 0 | 0 | 1 | 0 | 1 | 1 |
| 4 | 0 | 1 | 0 | 1 | 1 | 0 | 0 | 0 |
| 5 | 0 | 1 | 1 | 1 | 0 | 1 | 0 | 0 |
| 6 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 |
| 7 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 1 |
| 8 | 0 | 0 | 1 | 0 | 0 | 0 | 1 | 0 |

### Incidence Matrix

|   | 1,2 | 1,5 | 2,3 | 2,5 | 3,4 | 4,5 | 4,6 |
|---|-----|-----|-----|-----|-----|-----|-----|
| 1 | 1   | 1   | 0   | 0   | 0   | 0   | 0   |
| 2 | 1   | 0   | 1   | 1   | 0   | 0   | 0   |
| 3 | 0   | 0   | 1   | 0   | 1   | 0   | 0   |
| 4 | 0   | 0   | 0   | 0   | 1   | 1   | 1   |
| 5 | 0   | 1   | 0   | 1   | 0   | 1   | 0   |
| 6 | 0   | 0   | 0   | 0   | 0   | 0   | 1   |

|   | 1,2 | 2,3 | 3,4 |
|---|-----|-----|-----|
| 1 | -1  | 0   | 0   |
| 2 | 1   | 1   | 0   |
| 3 | 0   | -1  | 1   |
| 4 | 0   | 0   | -1  |

### Isomorphic

Same num of nodes, vertices and edge connectivity

### Diameter

Longest shortest path between any pairs

### NP-Complete

No known polynomial time solution

### Spanning Tree

Connected subgraph including all nodes without cycle

### Prim's Algorithm

Random choose vertex → add minimum weight adjacent edge
