

Steps to create a Visual Studio project

1. Start Visual Studio (may take about 1 min).
2. Select “New Project”
 - Choose “Empty Project”
 - Set the location of your project to the USB memory device, say E:\
3. Download the program file `tutorial_1.cpp` from Canvas.
 - Place the program file in your project directory.
 - Suppose your project is placed in `E:\project1`
 - Put the program file in `E:\project1\project1`
4. Right-click on “Source Files” and select “Add – Existing item”
 - Select `tutorial_1.cpp`
 - Double-click on the file name shown under “SourceFiles”, and you can edit the file in the main window.
5. To run your program
 - Click on the “green triangle (Local Windows Debugger)” or
 - Click on “Debug” and select “Start without debugging”
6. You can do all the tutorial exercises with the same project. There is no need to create a new project for each tutorial.
 - To replace the program file in the project:
 - o Right-click on the file name, and select “Remove”
 - o Then right-click on “Source Files” and add the new program file to the project
